SBPIN Notes First Workshop: Blue Growth

First day:

- **The participants gets a presentation of the project-partners**
- **Lecture with Akko Karlsson from Kalmar county: Our common history and identity**
 - o Rotation between countries
 - o Introduction to how it all started
 - o Joint interest in the Baltic Sea
 - o In Örebro, Sweden, we are under the normal water level
 - o ERB
 - Started 1998, 5,6 million inhabitants, 5 countries, 8 regions in Sweden, Denmark, Poland, Lithuania and Russia (Kaliningrad)
 - o Support municipalities international and Baltic Sea work
 - o Should have a lot of online meeting to get a good feeling in the group
 - o According to the evolution we started from the same place, Akkos biggest argument against racism
- **Presentation and video to be uploaded with Akko Karlsson separately.**

Second day:

- **Challenges within Water/Blue Growth from different perspectives around the South Baltic Sea**
 - o Nestved, Denmark
 - Common challenges that has to been taking care of together
 - What has been done: Supervision, control and advisory authority
 - Nestved has 60-70 water suppliers
 - Clash of interest, for example: Farmers and environmentalist
 - Each and every profession and/or sector have its own logic on production
 - 21 century challenges need basic innovative types of joining knowledge and skills together

- To reach this level takes a lot of clashes- in public and private enterprise, politics and steering
- To build chains of knowledge and skills: Partnership with Danish Technical University and University at Roskilde, Municipality of Nestved , Business association of Nestved
- Köge, Denmark
 - Coastal protection in Köge
 - Global warming- rising sea level
 - Köge run the risk of being flooded
 - Cost for potential damage; 250 million euros
 - Municipal working groups started in 2016 (8 of them in East Denmark)
 - Government pays in the western part but not in the eastern part
 - Optimistic time plan in Köge
 - Should work on an international level but it raises questions like who should be involved? Etc.
- Bartoszyce District, Poland
 - Situated in North of Poland
 - More than 90 % of the inhabitants of Bartoszyce are connected to sewage network, but only about 10 % in rural
 - Threatened as a partial thing in Poland
 - Working with water supply and water quality
 - Lack of full knowledge about the technical condition of underground water supply infrastructure
 - Lack of insufficient number of specialist in areas important for water security
 - Lack of adequate legislation, recommendations, guidance guidelines
 - Main challenges and needs in area of water supply
 - Inventory, renovation or renewal of underground water supply
 - Substantive and financial support of risk management
 - Support small water companies in integrated management systems

NETWORK

- Quality and risk in water supply processes
 - Environment
 - Quality of service provided
 - Information and communication with recipients and the media
 - There is no comprehensive approach to the construction, operation and supervision of small, domestic waste water treatment plants
- Gdansk, Poland
 - Most dangerous historical inundation 1875
 - Sea level in Gdansk 3,36 meters above sea level
 - Flood range- 66 % of historical city of Gdansk
 - Coastal flood 1775
 - Flood range 75 % of historical city of Gdansk
 - Assumed water level for flood map: 1,85 a.s.l
 - Radunia and Klodawa embankment numerous brakes
 - Srebrzysko reservoir front dam brake and Strzyza flood
 - Gdansk railway station inundation
 - Flood loss in municipal infrastructure- 200 million zloty
 - Future: Integrated numerical modelling of Gdansk rainwater system
 - The biggest challenge now: The “Gordian knot” on Strzyza stream
 - Cedry Wielkie commune, Poland
 - North of Poland
 - Challenges: Flood risk and sewage contamination
 - Vistula do not paralyze everyday life
 - Pump station has been renovated
 - Illegal sewage dumping is a huge problem
 - Challenges: Increase inhabitants using collective waste water systems, educate inhabitants about negative sewage dumping and increase quality
 - Zalewo, Poland
 - Lake covers 14 % of the commune area
 - Challenges:

- Water supply coverage and sewage systems of the commune
 - Restoration of ecological balance of polluted lakes and rivers
 - Adjustment of water management and water sewage infrastructure to changing climate conditions, water shortage, frequent flooding or storms
 - Improvement of drainage and irrigation system
 - Making efforts aimed at systematic adjustment and cleaning riverbeds and canals
- WiK, Poland
 - Supply of drinking water and sewage water
 - Water infrastructure
 - Water production
 - Action taken to combat *Aselus Aquaticus* which succeeded after 2 years
- **The power of differences**
- How diversity drives innovation
 - Differences: Experience, nationality, cultural background, knowledge, gender, beliefs, education, age
 - Much more effective to solve a problem if we see it from different ways
 - Diversity:
 - Inherent diversity-traits you are born with
 - Acquired diversity-traits you gain from experience
 - 2 dimensional diversity: 3 inherent and 3 acquired diversity traits
 - Companies with 2 dimensional diversity out-innovate and out-perform others
 - 45% likelier that the market share grew over the previous year and 70% likelier that the firm captured a new market
 - “Outside the box-ideas” are heard
 - Without 2D diversity
 - Women were 20% less likely to get their ideas heard
 - People of color 24% less likely
 - LGBTs 21% less likely
 - ... compared to straight, white, middle-aged men

NETWORK

- The results: Less innovative
- Other insights from the study
 - Leaders who give diverse voices equal airtime are nearly twice as likely as others to unleash value-driving insights
 - Employees in a “speak up” culture are 3,5 times as likely to contribute
- Other behaviors that unlock innovation
 - Safety
 - Trust
 - Feedback

To be supplemented with material from the workshops that will be attached to this meeting note.
